SUMMARY of SKILLS

- Programming languages: **Python, Java, Bash, C#, SQL (MySQL & Postgres), JavaScript, HTML** and **CSS**
- Tools: **AWS, GCP, Git/Bitbucket, Jenkins, Docker, SQL server**, .
- Web development: **React, VUE** and **Django**, integrating with **RESTful APIs, Express.js**.
- Machine Learning: **Natural Language Processing (NLP), Neural Network, Image Recognition, Clustering**.

EDUCATION

University of Sydney: Master of Information Technology

Sydney, Australia

Notable courses: Natural Language Processing, Machine Learning and Data Mining, Database Management systems

Aug. 2021 - Jan. 2023

University of Toronto: B.S. in Computer Science and Statistics

Toronto, Canada

Notable courses: Software Design, Software Tools and Systems Programming, Programming on Web

Sep. 2017 - Jun. 2021

EXPERIENCE

Biiibo Inc.

Toronto, Canada

Software Development Engineer

Jul. 2023 - Present

- Designed, developed, and maintained websites and ERP systems utilizing technologies such as **Python, Jinja**, and **JavaScript**. Enhanced **RESTful APIs**, integrated systems with Microsoft Teams, and optimized inventory accuracy and user experience.
- Designing cloud functions on the Google Cloud Platform (**GCP**) and running the backend with **Python3** and **Google Firebase**, Streamlined and enhanced functionality by integrating multiple apps including Microsoft Teams, OnFleet and Salesforce collaborated with the core stack.
- Conducted **IT solutions research**, performed **system analysis**, created **testing plans**, and integration testing using **Selenium**. As well as focused on improving **performance, quality, and scalability**, achieving 3x improvements by refactoring queries and various enhancements.
- Actively resolved software issues tracked in **Jira** and **DataDog**, offered technical support during on-call rotation, and assisted internal users and customers with technical support and guidance, resulting in a 20% customer satisfaction improvement.

Beijing Health Promotion Association

Remote

Software Developer

Jun. 2021 - Jun. 2023

- Developed and maintained a healthcare literature editing web application with a cross-functional team using **Java** and **Python**. Implemented **master-slave** replication strategy for relational database and **peer-to-peer** strategy for **NoSQL** database to minimize data latency.
- Transformed data incorporate with medical research protocols and business logic into the SQL queries to enforce **data quality and consistency**.
- Map the transformed data to the corresponding tables and fields in the research database and perform data governance and analysis.
- Developed and maintained a web portal using **React, ExpressJS** and **MongoDB**. Implemented CI/CD automation tools using **Jenkins**.

PROJECTS

Dynamic Shipping Rule System

May. 2024 - Jun. 2024

- Designed a Dynamic Shipping Rule system that automatically generates suitable shipping rules and delivery windows using **Pypika Query Builder** and **Strategy pattern** for evaluating shipping rules based on customer requests and order criteria, thereby ensuring smooth operation.
- Redesigned the Shipping Rule configuration within the **relational database** to streamline updates by internal users. Enabled seamless management of shipping rule availability, cut-off times, service areas, and weight limits. By implementing a more flexible **data schema**.
- Creating **permission levels** and validations for certain internal users who can override the shipping rules to increase system flexibility.

Onfleet x Frappe ERP framework Integration

Aug. 2023 - Feb. 2024

- Designed and implemented a delivery operation system integrated with Frappe ERP system and Onfleet task dispatch using **GCP cloud functions**, and **Google firebase** to **Create, Update**, and **Delete** driver tasks from ERP documents update webhooks to Onfleet platform.
- Implemented GCP **Pub/Sub** service to build an asynchronous and scalable messaging service and dashboards that generates Onfleet tasks, and **Retry mechanism** for Onfleet integration so that the operation team could manage and monitor the task creation process.
- Developed delivery track information reports and visualizations using **Google Analytic** by monitoring the transitional **Webhooks** request.

Patient Decision Aid

Aug. 2022 - Nov. 2022

- Designed and implemented an application toolset using **VUE, PHP** and **Vii** frameworks to support online interactive actions with users; deployed the application with **Amazon Web Services(AWS)** and **MySQL** that enabled the client to manage user data securely and efficiently.
- Collaborated with cross-functional teams, including designers, and project managers to gather requirements and deliver high-quality solutions.
- Developed website acquisitions reports and visualizations using **Google Analytics** by setting extensions and configurations.
- Implemented several high-customized functionalities such as **rich-text editor, d3.js** and **chart.js** to manage the website on the admin page.

In-game Toxicity Detection

Feb. 2022 - Jun. 2022

- Constructed multiple NLP generative Language models to complete in-game word slot tagging tasks such as **Text Classification** and **NER**.
- Researched the literature on **text embedding** methods to generate text input, improving the NLP models' performance by 20% on average.
- Fine-tune the model based on the evaluation results and developed a **web API** with the trained model into a production environment.
